Stefan de Lasa

EDUCATION

University of Toronto, Bachelor of Applied Science & Engineering - Computer Engineering 2020-2025 Seasonal GPA: 4.0 / 4.0, Cumulative GPA: 3.86 / 4.0 (Dean's Honour List)

(4 years + Co-op year)

Work Experience

Software Development Intern, CentML, Toronto, ON

Sep 2023 - Aug 2024

CentML O develops tools to make machine learning (ML) inference and deployment more affordable and efficient.

- Sole contributor of PyTorch model remote compilation project (Docker, AWS, k8s) for deployment optimization on CentML's cloud-hosted, distributed platform.
- Designed ML model compilation caching system, to reduce costs and improve user experience (**Postgres**, S3).
- Enabled developer workflows with a local compilation server, which is hostable via public client (Python).
- Developed a method to consistently hash ML models, including LLMs and CNNs.
- Added end-to-end testing support to CentML's platform. Wrote compilation server tests using this system.

Undergraduate Research Student, James Elder, York University, Toronto, ON

May - Aug 2023

The Elder Lab of is investigating using **image semantics** (classification of objects in an image) to improve computer vision monocular depth estimation. This has applications in self-driving cars, robotics, and more.

- Formulated methods to apply Elder's model to enhance existing ML depth estimation solutions.
- Demonstrated $\sim 20\%$ accuracy improvement over previous depth estimation models (Python).
- Awarded Student Choice Best Presentation at the Lassonde Undergraduate Research Conference.

Software Engineer Intern, PointClickCare (PCC), Toronto, ON

May - Aug 2022

PCC creates healthcare software to assist vulnerable populations with out-of-hospital care.

- Wrote front-end code to ease the editing of patient screening templates (**TypeScript**, **React**). Several internal users mentioned improved usability from my work.
- Extracted and sent user metrics to PCC's Pendo analytics and workflow improvements system.

Data Management Intern, Independent Electricity System Operator (IESO), Toronto, ON Jun - Aug 2021 As the Crown corporation responsible for operating/directing the electricity market in Ontario, the IESO gathers and monitors data from industrial customers throughout the province.

• Spearheaded machine learning project for anomaly detection, using IESO's historical datasets.

- Prepared presentation to highlight uses of **supervised learning** to improve existing processes.
- Performed in-depth review of Meter Service Provider data, for meter billing report correctness.

Extra Curriculars

aUToronto Planning Team Member, UofT Self-Driving Car Team, Toronto, ON

Sep 2023 - May 2024

The aUToronto planning team develops navigation algorithms for autonomous vehicles.

- Implemented method (C++, ROS2) to find the fastest route to the nearest empty parking spot.
- Proposed and implemented a technique to reduce map density, improving planning performance >20%.

UTSM Electrical Team Member, UofT Supermileage Team, Toronto, ON

Nov 2021 - May 2022

UTSM is a student team dedicated to designing and building a highly fuel-efficient vehicle. I contributed to projects on the electrical system design, including the turning indicators and windshield wipers.

Conferences

York Undergraduate Research Conference, Toronto, ON

Aug 2024

- Oral Presentation: "Improving Deep learning Depth Estimation models Using Image Semantics and Geometry".
- Recieved the Student Choice Best Presentation award.

PROJECTS

Programmable Compass

April 2023 🔗

- Used a GPS module to receive location data using USART communication and Direct Memory Access.
- Communicated via I2C with a magnetonomer to read magnet field data to determine my compass' orientation.
- Used Pulse-Width-Modulation to display the direction and distance to the programmed location on a LED ring.

OS161 (Operating System)

Jan 2023 - April 2023 🔗

- Implemented **memory management**, page reclamation, demand paging, and page swapping with disk.
- Created core system calls for user programs including waitpid, fork, and exec.
- Added key synchronization primitives such as locks and condition variables.

ML Model for Circuit Identification

Jan 2023 - Apr 2023 🔗

- Created a Convolutional Autoencoder Model (PyTorch) to segment circuits drawings into different modules.
- Achieved a 45% accuracy, representing a 200% increase from the baseline.
- Wrote scripts to prepare circuit image data for training, applying transformations to increase dataset size.

Digital Camera Optimization

Mar 2023 - Apr 2023 🔗

- Interfaced with a camera module to display a video stream, using a STM32 microcontroller.
- Achieved a 680% FPS improvement using data truncation, run-length encoding and delta frames.

Radio Transceiver

Jan - Apr 2022 🔗

- Designed limiter, filter, mixer, and amplifier circuits for a radio receiver (Altium, Multisim).
- Demonstrated successful integration of our subcircuits into a functioning radio transceiver.
- Communicated design rationale to technical and non-technical audiences through presentations.

OTHER

Citizenship: Canadian and American

Languages: English (Native Proficiency), French (Native Proficiency), Polish (Beginner)
